

Further Analysis

Beyond the main dashboard, I explored a few additional areas to understand customer behaviour, geographic performance, and delivery patterns in more detail.

1. Top 10 Customers by Revenue

Business question: Who are the highest-revenue customers?

Customer	Revenue
Samaira Ganesh	₹75,029.00
Seher Mann	₹70,409.00
Divit Mahajan	₹61,294.00
Jhanvi	
Chowdhury	₹59,666.00
Ranbir Loyal	₹53,082.00
Aradhya Batta	₹50,856.00
Akarsh Ramesh	₹50,313.00
Veer Ray	₹50,151.00
Mannat Anand	₹49,494.00
Anahita Shankar	₹49,100.00
Grand Total	₹569,394.00

This analysis identifies the customers contributing the most revenue. It can help the business understand its high-value customers and explore opportunities to strengthen customer relationships.

2. Repeat vs One-Time Customers

Business question: How many customers place repeat orders?

Repeat Customer 1000

All 100 customers in the dataset placed multiple orders. This indicates repeat purchasing among the recorded customers, although the dataset does not include any one-time customers for comparison.

This analysis looks at customer purchasing behaviour and helps assess repeat purchasing. The results can support future customer retention strategies.

3. Revenue by City

Business question: Which cities generate the most orders and revenue?

Top Cities	Orders	Revenue
Imphal	29	₹125,854.00
Kavali	27	₹109,979.00
Dhanbad	28	₹93,813.00
North Dumdum	19	₹81,663.00
Haridwar	24	₹80,733.00

Dibrugarh	21	₹76,822.00
Bhatpara	18	₹72,973.00
Agra	17	₹70,409.00
Bidhannagar	21	₹69,117.00
Chinsurah	16	₹50,151.00
Grand Total	220	₹831,514.00

The results show that order volume and revenue do not always follow the same pattern. For example, Bidhannagar has more orders than Agra, while Agra generates more revenue.

This comparison can help identify cities for targeted marketing and further investigation.

4. Average Delivery Time by Occasion

Business question: Does delivery time vary across occasions?

Occasion	Average Delivery Time (Days)
Holi	5.8
All Occasions	5.7
Raksha Bandhan	5.7
Anniversary	5.5
Birthday	5.5
Valentine's Day	5.3
Diwali	4.9

Holi has the longest average delivery time in this analysis, while Diwali has the shortest. This difference may be worth investigating when planning operations around key occasions.

5. Order Quantity vs Delivery Time

Business question: Is there a relationship between order quantity and delivery time?

Corelation Analysis - 0.003478174

The calculated correlation coefficient is approximately 0.0035, indicating virtually no linear relationship between order quantity and delivery time in this dataset.

6. Occasion vs Product Category Analysis

Business question: Which product categories generate the most revenue for different occasions?

Category	Cake	Colors	Mugs	Plants	Raksha Bandhan	Soft Toys	Sweets	Grand Total
All Occasions		₹1,05,732.00	₹1,11,610.00		₹60,640.00	₹2,86,898.00	₹1,21,296.00	₹5,86,176.00
Anniversary	₹87,176.00	₹53,954.00		₹1,16,936.00	₹1,56,384.00	₹75,960.00	₹1,84,224.00	₹6,74,634.00
Birthday	₹30,289.00	₹1,57,781.00	₹38,520.00	₹34,268.00	₹30,324.00	₹80,640.00	₹36,372.00	₹4,08,194.00
Diwali		₹58,253.00		₹34,936.00	₹42,000.00		₹1,78,594.00	₹3,13,783.00
Holi	₹91,642.00	₹3,20,798.00	₹69,601.00	₹16,880.00		₹24,131.00	₹51,630.00	₹5,74,682.00
Raksha Bandhan	₹53,615.00	₹1,58,564.00				₹2,57,680.00	₹1,61,726.00	₹6,31,585.00
Valentine's Day	₹67,140.00	₹1,50,563.00	₹81,420.00	₹9,261.00	₹8,024.00	₹15,522.00		₹3,31,930.00
Grand Total	₹3,29,862.00	₹10,05,645.00	₹2,01,151.00	₹2,12,281.00	₹2,97,372.00	₹7,40,831.00	₹7,33,842.00	₹35,20,984.00

The heat map compares category revenue across different occasions, helping highlight strong and weak combinations. These patterns can inform product bundles, promotions, and seasonal inventory planning.

Summary

These additional analyses provide a closer look at customer purchasing behaviour, city-level performance, delivery patterns, and product preferences across occasions. Together, they help identify areas for further investigation and support more informed business decisions.
